

PRODUCT BRIEF

AT&T Local Private Line Service

Efficient, Cost-Effective, Dedicated Communications

Your business is growing to multiple sites within a metropolitan area. That means you need strong communications between these sites. You need data transmission services that are faster and more efficient, with the diversity to protect your network assets.

AT&T Local Private Line Service lets you connect your locations in a metropolitan area with safe, efficient and reliable communications at high speeds using AT&T's network.

Speeding Over a Local Network Near You

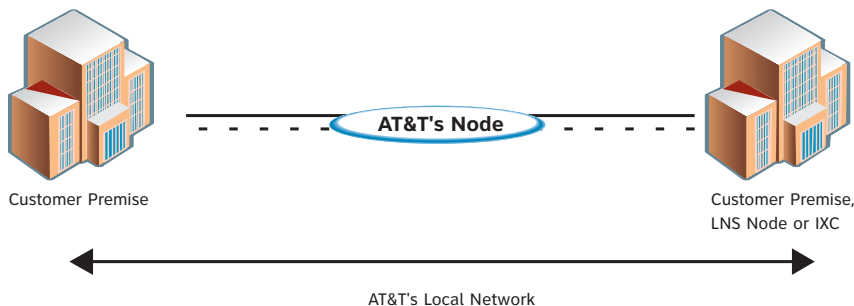

AT&T Local Private Line Service utilizes SONET technology, which gives you unprecedented quality of service, reliability and scalability. AT&T's maintenance center personnel monitor your service around-the-clock, ensuring the

highest performance is achieved. Because you are using dedicated private lines, you gain the utmost in security because no other customer can use your communications path.

AT&T Local Private Line Service offers speeds of DS1, DS3, OC3c, OC12c, OC48c, OC192c STM1, STM4, STM16o and Ethernet speeds of 50 Mbps, 150 Mbps, 300 Mbps, 600 Mbps, and 1 Gbps. You can even "mix-and-match" your bandwidth needs across the same communication path.

AT&T Local Private Line Service can also connect your location to a non-AT&T Inter Exchange Carrier Point Of Presence, to your disaster recovery center, or to your Internet Service Provider.

AT&T's Local Network

Benefits

- Dedicated, private and secure point-to-point connectivity between your business locations, hosting centers, data centers and other service providers
- Regional, competitive, mileage-based pricing
- Cost-effective and scalable up to 9.9 Gbps
- Available in more than 70 metropolitan areas across the United States
- Single point-of-contact
- Service is monitored 24x7

Features

- Configures private lines over physically diverse routes if diversity is a requirement
- Use Self-healing SONET Network to route customer traffic
- Offers customers a Network Availability SLA¹ that provides credits in the rare event of a service interruption

Pricing and Management for the Local Market

Choose a city or metropolitan area, and we'll design an end-to-end dedicated local private line solution specifically for you. You'll quickly discover the breadth of geographic coverage AT&T Local Private Line Service offers. With more than 70 metropolitan areas in the United States, AT&T has demonstrated its commitment to ensuring we are there for you.

Protecting Your Mission-Critical Data

Because your communications run over AT&T's highly robust Local SONET network, you are assured of the protection and reliability you expect from AT&T. AT&T's target is to achieve up to 99.995% network reliability because of our use of a state-of-the-art self-healing fiber optic network. In fact, the network is designed to recover from disasters, such as a fiber cut or electronic

component failure, within 50 milliseconds, if you have 1+1 card protection. Usually, our network routes around failures so quickly that your local private line won't experience any noticeable impact.
